

Please Read: Safety First

Here at Cuddly Comforts we take safety very seriously, which is why we strongly recommend you read through this brief guide to ensure your hot water bottle keeps you warm and cozy – and safe.

Now you've received your bottle, hopefully it smells great and you can feel the quality. check inside for a very brief guide on how to enjoy our extra-long hot water bottle safely.

Hot Water Bottles from Cuddly Comforts

Hi there! Steve here, from Cuddly Comforts. We are a small team from Northern Ireland with a goal to keep you toasty warm and safe.

If you have any questions/suggestions/problems/improvements then please do not hesitate to drop me an **email:** cuddly@extralonghotwaterbottle.com I read and respond to them all.

Please consider leaving an **Amazon review**. A verified review helps us greatly. 😊

1. Heat the water by your preferred method. We use a kettle, but the choice is very much your own. Either flick the kettle off before it boils or leave it to stand and settle for a few minutes before pouring, to avoid getting burns or scalds (nobody wants a burned hand).

2. Slowly does it when filling the bottle. Nice and easy. Remember, it's a big 'un so no need to fill it full to the top. Two thirds of the way up is plenty.

3. Slide the bottom of the hot water bottle on to a flat surface until the water appears near the opening. Gently expel all of the air.

4. Ensure the screw top is sufficiently tightened to guard against any water leaks. As cuddly as your hot water bottle is, don't lie on top of it or increase any kind of pressure on the body. Even though it's made to the highest safety standards, if the weight is too much, it might burst!

5. Exercise caution if you have sensitive skin, if a child or elderly person is using the hot water bottle. We want you warm, not hurt.
